

# MagicWhite Frequently Asked Questions

## ***Q. What is MagicWhite?***

MagicWhite is a bleaching process utilising cold blue light technologies and hydrogen peroxide solutions that lightens discolouration of tooth enamel and dentine.

## ***Q. What causes tooth discolouration?***

There are many causes. These include ageing and lifestyle, the consumption of staining substances such as coffee, tea, carbonated drinks, tobacco and red wine. During tooth formation, consumption of tetracycline, certain antibiotics or excessive fluoride may also cause tooth discolouration.

## ***Q. Who can benefit from tooth whitening?***

Almost everyone. However, treatment may not be as effective for some clients; genetics plays a big role in the end result, it is impossible to whiten teeth beyond what is the genetic disposition of the client.

## ***Q. How long will it last?***

Your whitened smile can last 2 – 5 years, but this will depend on the patient's lifestyle and oral hygiene habits.

## ***Q. Are my teeth more easily stained after whitening?***

For the first 48 hours, it is important NOT to eat foods which can stain your teeth. After this initial period the chance of staining your teeth is not increased following whitening.

## ***Q. What about my teeth with fillings and crowns?***

Although the teeth around the fillings will lighten, the fillings themselves and crowns will not whiten to the same extent. Some whitening of tooth-coloured restorations may occur but ceramic fillings and crowns will not change in colour. Any tooth-coloured restorations on your front teeth will need to be replaced after the whitening procedure.

***Q. Do I need my teeth cleaned before MagicWhite?***

Yes it is always advisable to freshly clean your teeth before and after your MagicWhite treatment.

***Q. How safe is MagicWhite?***

Yes. Clinical studies have shown that bleaching with hydrogen peroxide is 100% safe.

***Q. Is there anyone who shouldn't use MagicWhite?***

Light sensitive individuals, including those undergoing PUVA therapy (Psolaren+UV Radiation) or other photo chemotherapy, or patients with melanoma, should not undergo the MagicWhite treatments or any other teeth whitening treatments. Also, it is advisable that patients taking any light sensitive drugs or substances, whether over the counter, prescription or homeopathic, should consult their doctor prior to the procedure.

***Q. Are there any side effects?***

Sensitivity during the treatment may occur with some patients. The MagicWhite light generates almost no heat; heat is the usual source of discomfort. Occasionally, minor tingling sensations are experienced immediately after the procedure, but always resolved, usually within a few hours. We recommend taking Nurofen or Panadol after the whitening procedure to assure your total comfort. MagicWhite is 100% safe and incredibly fast.

You won't believe the end result and neither will your family & friends!

*MagicWhite is at the leading edge of professional teeth whitening systems in Australia today! Remember just one 30 minute treatment and you will have something else to smile about, not just the price!!!!*
